

Liteslider Modular Sliding Doors

METALBILT DOORS

Lightweight sliding door for large openings.

The Liteslider Modular Sliding Doors are Metalbilt's heavy industry range of sliding doors and suit large industrial openings. These low projection doors allow a range of cladding profiles or timber finishes to suit each individual client's needs.

OVERVIEW

Either top hung or running on a floor track system so that the weight of the door is not carried by the building structure, these galvanised steel doors can be easily manually operated or motorised using rack and pinion drive units.

Each door is tailor-designed and constructed to suit the size of opening, the chosen cladding material and the required wind loading.

APPLICATIONS

Liteslider Modular Sliding Doors are designed to suit many commercial and industrial projects including:

- Factories
- Sheds, barns and plant and machinery rooms
- Warehouses and storage facilities
- Industrial buildings

SPECIFICATIONS

Standard:

- Top hung or floor track options.
- Doors can be single leaf, bi-parting or multiple stacking.
- Designed to suit wind load.

Cladding:

- Aluminium glazing
- Colour steel or aluminium-profiled cladding
